

PLATFORM REFINEMENTS & DEVELOPMENT CHANGELOG

A documented summary of layout stabilizers, styling enhancements, and content adjustments implemented on the Profit & Stocks platform.

PREPARED FOR

Mr. S. Kumar (Profit & Stocks)

PREPARED BY

Zerfinity Development Team

DATE DOCUMENTED

June 24, 2026

BUILD STATUS

TypeScript Compiled & Verified

1. Executive Summary

This document details the layout adjustments, cosmetic improvements, content refinements, and typography refinements successfully applied to the **Profit & Stocks** single-page application today. The focus of this milestone was to eliminate layout shifts (jerkiness), establish visual consistency, make the customer testimonial slider robust on desktop viewports, and ensure correct regulatory details.

Key Accomplishments

Our team addressed layout instability by enforcing fixed dimensions on dynamic content areas and improved visual indicators to make the pages feel highly responsive.

2. Refinement Changelog Table

The following table tracks every modification executed today, categorizing them by implementation type and showing the shift from the old legacy behavior to the newly polished UX:

Category	Refinement Target	Old Legacy / Initial Behavior	Revamped Behavior
LAYOUT	Hero Banner Height	Container height jumped dynamically when motto headings wrapped to a second line.	Enforced fixed height on hero content to prevent layout shifts.
CONTENT	Highlight Tags	Labels read "SEBI Certified Guidance", "Mentorship", and "Hand-Holding Support".	Updated to "SEBI Certified Mentors", "Practice Based Training", and "Doubts Clearing".
LAYOUT	Core Highlight Cards	Cards were arranged in original order.	Rearranged cards to place emphasis on key benefits first (last card moved to first place).
CONTENT	Founder Credentials	Displayed standard title "SEBI & NISM Certified Research Analyst".	Changed text format to "(SEBI/NISM Certified Research Analyst)" for clean citation.
STYLING	Underlined Titles	No visual underlines on founder details.	Added underline text styling to "(SEBI/NISM Certified Research Analyst)" and "Mr. S. Kumar".
LAYOUT	Courses Grid	Catalog only displayed a subset of courses.	Built a full structured list of all 8 courses with proper categorization.
LAYOUT	Testimonials Carousel	Displayed testimonials one box at a time, resulting in significant unused grid space.	Upgraded to show 3 side-by-side testimonial cards at a time on desktop.

Category	Refinement Target	Old Legacy / Initial Behavior	Revamped Behavior
LAYOUT	Testimonial Card Size	Card sizes adjusted dynamically with text length, causing clipping during slider transitions.	Locked cards to fixed dimensions (360px width, 320px height) and centered them cleanly.
STYLING	Footer Heading Underlines	Underlines were short, fixed-width (30px) accents under block elements.	Set headers to fit-content and underlines to 100% width, matching text length perfectly.
STYLING	Nav Menu Font Size	Navigation links rendered at 17px.	Scaled up nav links to 20px in index.css to increase visibility and hierarchy.
STYLING	Market Ticker Theme	Dark theme ticker with 44px container height.	Revamped to light colorTheme with white (#ffffff) background and a 36px slim & sleek profile.
CODE	Ticker Symbol Feeds	Unrecognized NSE symbol tags showing red warning icons.	Fixed to valid BSE & Forex identifiers (BSE:SENSEX, BSE:RELIANCE, BSE:TCS, etc.) with real-time data.
LAYOUT	Stock Ordering	Unsorted list of ticker symbols.	Arranged top Indian stocks in strict alphabetical order (ADANI ENT, ASIAN PAINTS, AXIS BANK ... WIPRO).
CODE	Ticker Data Architecture	Hardcoded symbols array embedded directly in component script.	Created modular src/config/tickerStocks.json with Top 50 Indian stocks and customSymbols prop support.
CODE	Automated Deployment	Manual static hosting updates.	Automated GitHub Pages CI/CD pipeline via .github/workflows/Deployer.yml on push to main.

3. Technical Refinement Notes

Testimonials Slider Stability (CSS & React)

By mapping a sliding index offset in the React render method (`(reviewIdx + offset) % length`), three cards are mounted simultaneously. Applying fixed widths (`360px`) and heights (`320px`) inside the `.review-card` container ensures that when a user clicks the "Next" or "Previous" buttons, the text swap triggers instantly without altering the container boundary box, preventing layout shifts in the section below.

Semantic CSS Underline Styling

Rather than using fixed inline divider boxes which look detached on fluid viewport sizes, we refactored headings to wrap exactly to content length (`width: fit-content;`). The pseudo-element border is then mapped to `width: 100%`, aligning the blue line directly underneath the final characters of each footer title.

Configurable Market Ticker Architecture (JSON & React)

The market ticker component was decoupled from inline hardcoded arrays into a dedicated external configuration asset at `src/config/tickerStocks.json`. The ticker tape loads the top 50 Indian bluechip stocks (sorted alphabetically from ADANI ENT to WIPRO) and key indices. The React component (`TickerTape.tsx`) dynamically parses this configuration while offering an optional `customSymbols` prop for runtime overrides.

4. Verification & Compilation Status

All styling and TypeScript modifications have been fully compiled and checked against production build targets:

- **TypeScript Verification:** Run `tsc -b` and succeeded with zero type compilation errors.
- **Vite Bundler Execution:** The site compiled into minified chunks successfully.
- **Responsive Stacking:** Testimonial grids collapse cleanly from 3-columns on desktop to 2-columns on tablet, and stack vertically in 1-column layout on mobile screens.

Build Verification Result

✓ Build completed successfully (Assets compiled into dist/ directory: index.js and index.css).
